

HK32F030M Datasheet

Version: 1.3.1

Release Date: 2022-11-01

Shenzhen Hangshun Chip Technology R&D Co., Ltd

<http://www.hsxp-hk.com>

Preface

Purpose

This document introduces the block diagram, memory mapping, peripheral interfaces, electrical characteristics, and pinouts of HK32F030M Series SOC, to help users quickly understand its features and functions.

Audience

This document is intended for:

- HK32F030M Developer
- HK32F030M Tester
- HK32F030M user

Release Notes

This document is corresponding to HK32F030M Series SOC.

Revision History

Version	Date	Description
1.0	2020/02/21	Initial release
1.0.1	2020/03/04	Update <i>Section 3.9 Low-power modes.</i>
1.0.2	2020/03/09	Update <i>Section 4.2.5 Operating current.</i>
1.0.3	2020/06/19	Update <i>Section 3.7.2 clock tree.</i>
1.0.4	2020/07/03	Update <i>Section 4.2.9 Flash memory characteristics.</i>
1.0.5	2020/10/12	Update <i>Section 3.22 ADC.</i>
1.0.6	2020/10/16	Update <i>Section 6.4 QFN20.</i>
1.1	2021/03/18	Update <i>Section 4.2.14 ADC characteristics.</i>
1.1.1	2021/06/01	Update <i>Section 4.2.14 ADC characteristics.</i>
1.2	2021/11/23	Update <i>Section 3.1 Block diagram, Section 3.2.1 Flash features and Section 4.2.10 I/O port characteristics.</i>
1.3	2022/10/08	Modified the following features: <ul style="list-style-type: none">• The bit width of TIM2, the max frequency of the GPIO input clock, the typical operating current• The Block diagram and the system reset diagram• Add the content of HK32F030MF4N6 models
1.3.1	2022/11/01	Corrected the grammar errors in the whole document.

1 Introduction

This document is the datasheet for HK32F030M series System-on-Chips (SOCs). HK32F030M is a family of economic microcontrollers (MCU) developed by Shenzhen Hangshun Chip Technology R&D Co., Ltd, including:

- HK32F030MF4U6
- HK32F030MF4N6
- HK32F030MF4P6
- HK32F030MD4P6
- HK32F030MJ4M6

2 HK32F030M Overview

Based on ARM® Cortex®-M0 core, HK32F030M embeds a 16-Kbyte Flash, a 448-byte EEPROM, and a 2-Kbyte SRAM. Its maximum frequency is 32MHz.

Except for Power and Ground pins, the rest pins of HK32F030M can be used as GPIOs, peripheral IOs, or external interrupt inputs. In application scenarios where the pins are limited, HK32F030M provides as many pin functions as possible.

HK32F030M provides several communication interfaces:

- 1 x high-speed USART (up to 4 Mbit/s)

USART supports synchronous and asynchronous communication, multi-master communication, LIN mode, Smart Card mode, and IrDA SIR CODEC (coder and decoder). RX and TX pins can be interchanged by software. In Stop mode, MCU can be woken up by receiving data.

- 1 x high-speed SPI/I2S (up to 16 Mbit/s)

SPI/I2S supports full-duplex and half-duplex communication with 4-bit to 16-bit data, Master/Slave mode, TI mode, NSS pulse mode, automatic CRC verification, and the I2S protocols.

- 1 x high-speed I2C (up to 1 MHz)

I2C supports 1 MHz/400 kHz/100 kHz transmission rate, Master/Slave mode, multi-master mode, 7-bit/10-bit addressing mode, and the SMBus protocol. In Stop mode, MCU can be woken up by receiving data.

HK32F030M embeds a 16-bit advanced PWM timer (total 4 PWM outputs, 3 of which can output complementary signals with dead time), a 16-bit general purpose PWM timer (total 4 PWM outputs), and a 16-bit basic timer (it can output interrupts at a specified time).

HK32F030M integrates analog circuits: one 12-bit ADC (up to 1 MSPS, 8-bit accuracy), one power on reset (POR)/power down reset (PDR) circuit, and one internal reference voltage (sampled by on-chip ADC).

HK32F030M supports multiple power consumption modes. In low-power mode, HK32F030M can be woken up automatically by an internal low-power timer.

HK32F030M can operate in the temperature range of -40°C to +85°C, and the supply voltage ranges from 1.8 V to 3.6 V. It can meet the requirements of most application environments.

Because of its various peripheral interfaces, HK32F030M can be used in various sets of applications. Examples of these applications include:

- Programmable controllers, printers, and scanners
- Motor drivers and speed control
- Low-power terminals with sensor for the Internet of Things
- UAV flight control, pylon control
- Toy products
- Household appliances
- Intelligent robots
- Smart watches, sports bracelets

2.1 Features

- CPU core
 - ARM® Cortex®-M0 core
 - Maximum frequency: 32 MHz
 - 24-bit SysTick timer
 - Supports interrupt vector remapping (through configuring Flash registers)

- Operating voltage range: 1.8 V to 3.6 V
- Operating temperature range: -40°C to +85°C
- Typical operating current
 - Run mode: 2.338mA@32 MHz@3.3V (73 μ A/MHz)
 - Sleep mode: 1.197mA@32 MHz@3.3V (35 μ A/MHz), wake-up time: 21 ns
 - Deep Sleep mode: 0.613mA@114 kHz@3.3V, wake-up time: 7.8 μ s
 - Stop mode: 30.12 μ A@3.3V, wake-up time: 10 μ s (woken up by an external pin or an internal timer)
- CPU tracking and debugging
 - SWD debug interface
 - ARM® CoreSight™ debug component (ROM-Table, DWT, BPU)
 - Customized DBGMCU debug controller (low-power mode simulation controlling, the debug peripheral clock controlling, and debug and track interfaces allocating)
- Memory
 - 16 Kbytes Flash (128 pages of 128 bytes; 32-bit data (read), 16-bit data(write))
 - Flash data security protection function (read or write protection can be set respectively)
 - 448 bytes EEPROM
 - 2 Kbytes SRAM
- Data security
 - CRC verification hardware unit
- Clock
 - External GPIO input clock: 32MHz (Max)
 - Internal high-speed clock (HSI): 32MHz
 - Internal low-speed clock (LSI): 114kHz
- Reset
 - External pin reset
 - Power reset
 - Software reset
 - Watchdog timer reset (IWDG and WWDG)
 - Low-power management reset
- GPIO
 - Up to 16 GPIOs (TSSOP20/QFN20 package)
 - Each GPIO can be used as an external interrupt input
 - Built-in switchable pull-up/pull-down resistors
 - Supports Open-drain outputs
 - High/low output drive capacity
- IOMUX pin functionality remapping controller
 - Small package (SOP8/TSSOP16), a pin can be remapped to multiple GPIOs or peripheral I/Os by IOMUX.
- Data communication interfaces
 - 1 x high-speed USART (up to 4 Mbit/s)
 - 1 x high-speed I2C (up to 1 MHz)
 - 1 x high-speed SPI/I2S (up to 16 Mbit/s)
- Timer and PWM generator

- 1 x 16-bit advanced PWM timer (total 4 PWM outputs, 3 of which can output complementary signals with dead time)
- 1 x 16-bit general-purpose PWM timer (total 4 PWM outputs)
- 1 x 16-bit basic timer (supports CPU interrupts)
- 1 x automatic wake-up timer, which can work in Stop mode.
- Beeper
 - 1 x beeper, which can output pulses at a frequency of 1, 2, 4, or 8 kHz.
 - In stop mode, the beeper continues to work and triggers ADC sampling at a fixed time.
- On-chip analog circuits
 - 1 x 12-bit ADC up to 1 MSPS (total 5 analog input channels, supports differential input pairs)
 - POR/PDR
 - 1 x 0.8 V internal reference voltage (sampled by ADC on chip)
- UID
 - 64-bit unique ID
- Reliability
 - Passed HBM6000V/CDM500V//LU700mA level tests.

2.2 Device overview

Table 2-1 HK32F030M series features

Features	HK32F030MJ4M6	HK32F030MD4P6	HK32F030MF4P6	HK32F030MF4U6/ HK32F030MF4N6
Operating voltage	1.8 V ~ 3.6 V			
Operating temperature	-40°C ~ +85°C

3 Function Description

3.1 Block diagram

ARM® Cortex®-M0 is a 32-bit RISC processor, which provides an MCU platform with low-cost and low-power consumption features. It delivers outstanding computational performance and an advanced system response to interrupts. With its embedded ARM Cortex-M0 core, the HK32F030M family is compatible with ARM tools and software.

Take HK32F030MF4U6 for example, the block diagram of HK32F030M shows as follows:

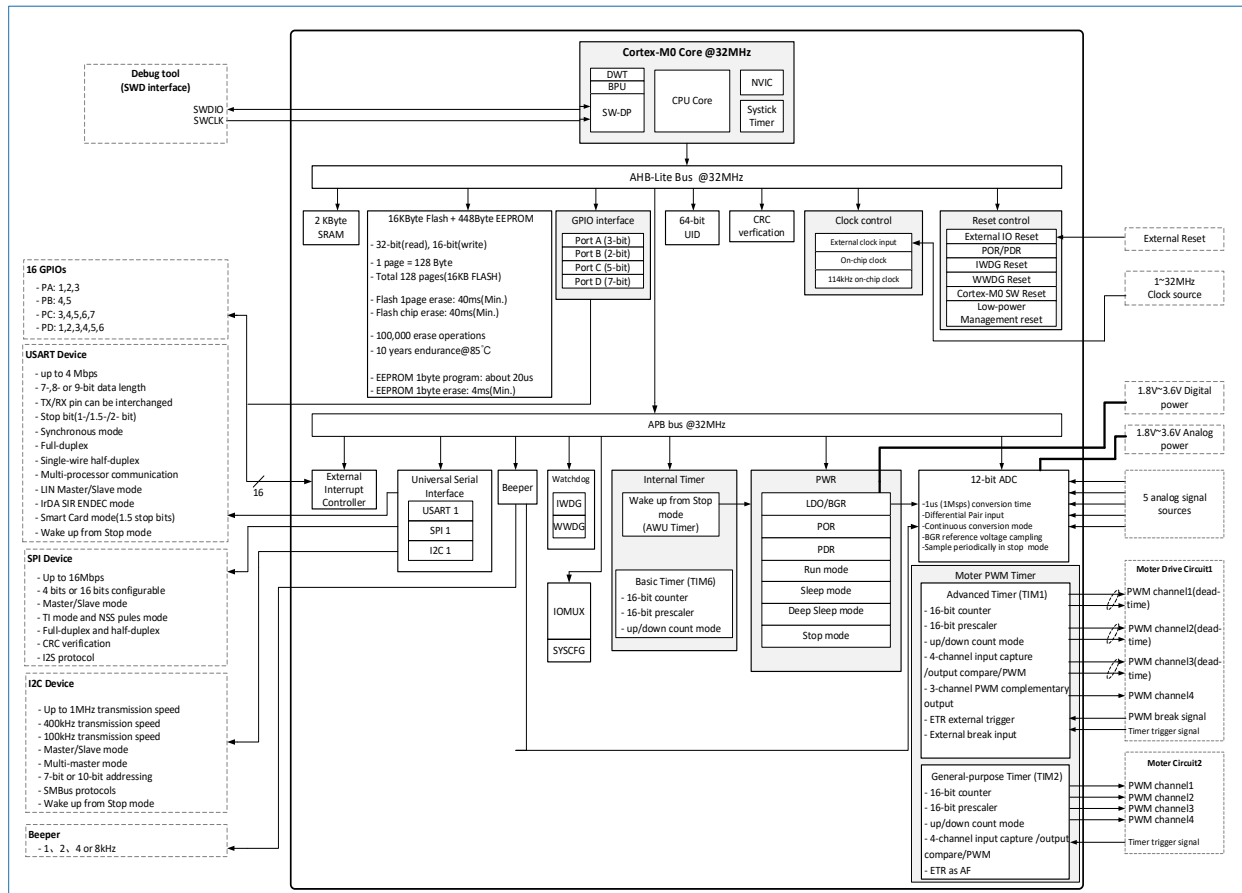

Figure 3-1 HK32F030MF4U6 MCU block diagram

3.2 Memory mapping

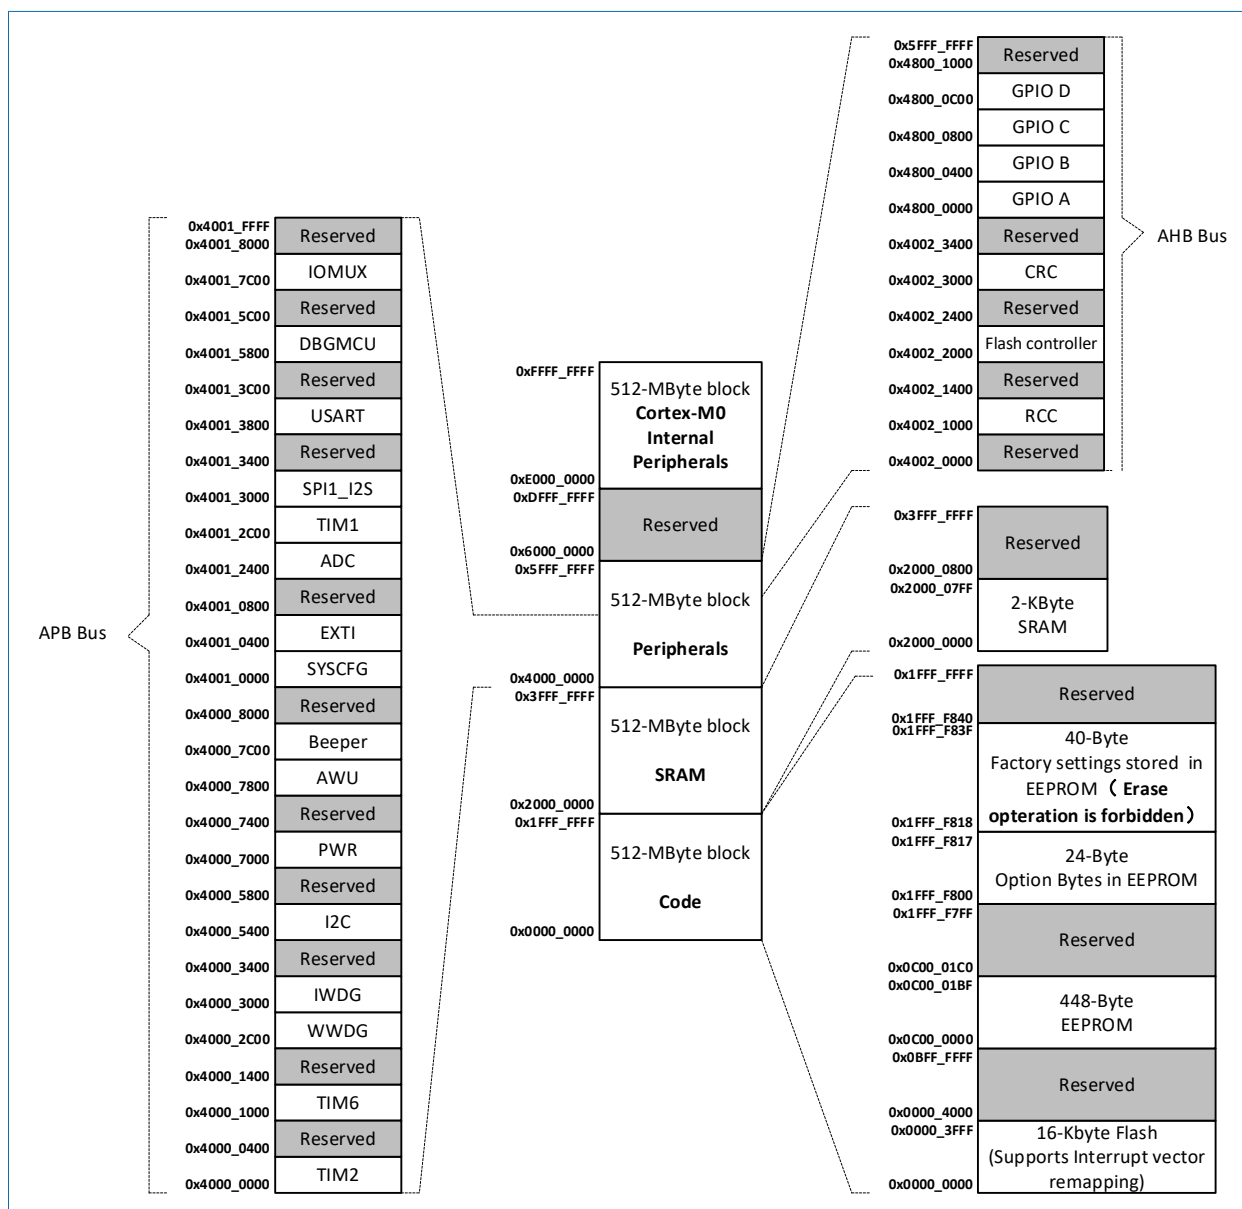

Figure 3-2 Memory mapping

3.2.1 Flash features

- Flash data width: 32 bits (read), 16 bits(write)
- 128 bytes per page
- Flash access: write in a unit of half-word (16 bits); read in a unit of 32 bits
- Flash read/write protection
- Support interrupt vector table remapping by register configuration

Table 3-1 Flash features

Operation time	Read operation	Erase/write operation
	If $1.8V \leq V_{DD} \leq 2.4V$: <ul style="list-style-type: none"> LATENCY=000 and $HCLK \leq 16$ MHz, Zero clock period wait. LATENCY=001 and 16 MHz $< HCLK \leq 32$ MHz, one clock period wait 	<ul style="list-style-type: none"> Write (half word): about 60 μs Flash page erase: 40 ms (Min) ($t_{erase} = 1/f_{LITECLK} * 160$) Flash mass erase: 40 ms (Min)

	<p>If $2.4V < V_{DD} \leq 3.6$:</p> <ul style="list-style-type: none"> LATENCY=000 and $HCLK \leq 24$ MHz: Zero clock period wait LATENCY=001 and $24 \text{ MHz} < HCLK \leq 48$ MHz: one clock period wait LATENCY=010 and $24 \text{ MHz} < HCLK \leq 48$ MHz: two clock periods wait 	
Endurance	Supports about 100,000 cycles erase, read and write operations.	

3.2.2 Flash Option Word

Table 3-2 Flash Option Word

Address	[31:24]	[23:16]	[15:8]	[7:0]
0x1FFF_F800	nUSER	USER	nRDP	RDP
0x1FFF_F804	nDATA1	DATA1	nDATA0	DATA0
0x1FFF_F808	nWRP1	WRP1	nWRP0	WRP0
0x1FFF_F80C	nWRP3	WRP3	nWRP2	WRP2
0x1FFF_F810	IWDG_INI_KEY[15:0]		Reserved	IWDG_RL_IV[11:0]
0x1FFF_F814	DBG_CLK_CTL[15:0]		LSI_LP_CTL[15:0]	

- IWDG_RL_IV[11:0]: stores the initial value of the IWDG_RLR register. If IWDG acts as a hardware watchdog, configure the IWDG_RL_IV register to set the interval of IWDG reset time.
- IWDG_INI_KEY[15:0]: to determine whether IWDG_RL_IV is valid or not. When the value of IWDG_INI_KEY equals to 0x5B1E, IWDG_RL_IV is valid, otherwise, it is invalid.
- LSI_LP_CTL[15:0]: MCU enters the Stop mode after enabling IWDG, the system can be woken up by IWDG via configuring LSI_LP_CTL.
 - If LSI_LP_CTL is set to 0x369C, when MCU enters the Stop mode, LSI can be turned off according to the LSION configuration. After MCU is woken up, LSI recovers to the state before entering these modes.
 - If LSI_LP_CTL is not set, the system can be woken up by IWDG periodically after IWDG is enabled and MCU enters the Stop mode.
- DBG_CLK_CTL[15:0]: When DBG_CLK_CTL equals 0x12DE, the CPU debug clock is turned off, otherwise it stays on.

Note:

For the details about the field of address 0x1FFF_F800 to 0x1FFF_F80C in [Table 3-2](#), please refer to “Section 3.1.7: Flash option byte register” in *HK32F030M Reference Manual*.

3.2.3 SRAM

HK32F030M integrates a 2-Kbyte SRAM and supports read/write access in word, half word and byte. CPU can access SRAM fast with zero wait period to meet the requirements of most applications.

3.2.4 EEPROM

HK32F030M MCU integrates a 448-byte EEPROM.

Table 3-3 EEPROM features

Operation time	Read operation	Erase/write operation
	<p>When $1.8V \leq V_{DD} \leq 2.4V$:</p> <ul style="list-style-type: none"> LATENCY=000 and $HCLK \leq 16$ MHz: zero clock period wait. LATENCY=001 and $16 \text{ MHz} < HCLK \leq 32$ MHz: 1 clock period wait 	<ul style="list-style-type: none"> Write (byte): about 20 μs Erase (byte): 4 ms (Min)

	When $2.4V < V_{DD} \leq 3.6V$: <ul style="list-style-type: none"> LATENCY=000 and $HCLK \leq 24\text{ MHz}$: zero clock period wait. LATENCY=001 and $24\text{ MHz} < HCLK \leq 48\text{ MHz}$: 1 clock period wait 	
Endurance	Supports about 100,000 cycles erase, read and write operations; Endurance (about 10 years)	

3.3 CRC Calculation Unit

CRC is used to verify data transmission or storage integrity. HK32F030M integrates a CRC calculation unit to reduce user applications processing burden, and to provide the ability to accelerate processing.

CRC calculation unit helps compute a signature of the software during runtime, to be compared with a reference signature generated at link-time and stored at a given memory location.

3.4 NVIC

HK32F030M MCU embeds a nested vectored interrupt controller to handle interrupt flexibly with low interrupt latency. HK32F030M has 21 external interrupts.

- Closely coupled NVIC allows low latency interrupt processing.
- Interrupt entry vector address passed directly to the core.
- Closely coupled NVIC core interface.
- Allows early processing of interrupts.
- Processing of late arrived higher priority interrupts.
- Supports for tail-chaining.
- Processor state automatically saved
- Interrupt entry restored on interrupt exit with no instruction overhead

Table 3-4 NVIC

Position	Priority		Name	Description	Address
-	-	-	-	Reserved	0x0000_0000
-	-3	Fixed	Reset	Reset	0x0000_0004

30	37	Settable	-	-	0x0000_00B8
31	38	Settable	-	-	0x0000_00BC

3.5 EXTI

HK32F030M MCU embeds 12 external interrupt/event controller (EXTI) lines. EXTI0- EXTI7 connects to IOs, others can be configured to trigger the following events.

- EXTI8 connects to ADC to detect an AWD event
- EXTI9 connects to USART to detect a wake-up event
- EXTI10 connects to I2C to detect a wake-up event
- EXTI11 connects to automatic wake-up (AWU) events

EXTI8-EXTI10 are used as internal events, without the RTSR, FTSR, SWIE, and PR register. EXTI8-EXTI10 generate ERQ and IRQ signals to wake up the system by a rising edge of an event in Stop mode.

3.6 Reset

HK32F030M MCU supports System reset and Power reset.

3.6.1 System reset

Except for the reset flags in the RCC_CSR register and registers in the backup domains, System reset signal resets all the rest registers. When any of the following events occurs, a system reset signal is generated:

- Low level on NRST pin (External Reset)
- Window watchdog counting terminates (WWDG Reset)
- Independent watchdog counting terminates (IWDG Reset)
- Software reset (SW Reset): by setting SYSRESETREQ bit to '1' or Cortex-M0 interrupt to perform Software

reset.

- Low-power management reset

You can identify a reset source by checking reset state flags in the RCC_CSR register.

3.6.2 Power Reset

When the following event occurs, a power reset signal is generated:

- POR/PDR

The power reset signal resets all registers except for registers in the backup domain. The reset source affects on Reset pin at last and keeps low level in the progress of Reset. The reset entry vector is fixed at address 0x0000_0004.

An Internal Reset signal outputs on the NRST pin. A Pulse generator ensures that each reset source produces at least 40 us pulse latency. When the NRST pin is pulled down and a reset pulse is generated for an external reset.

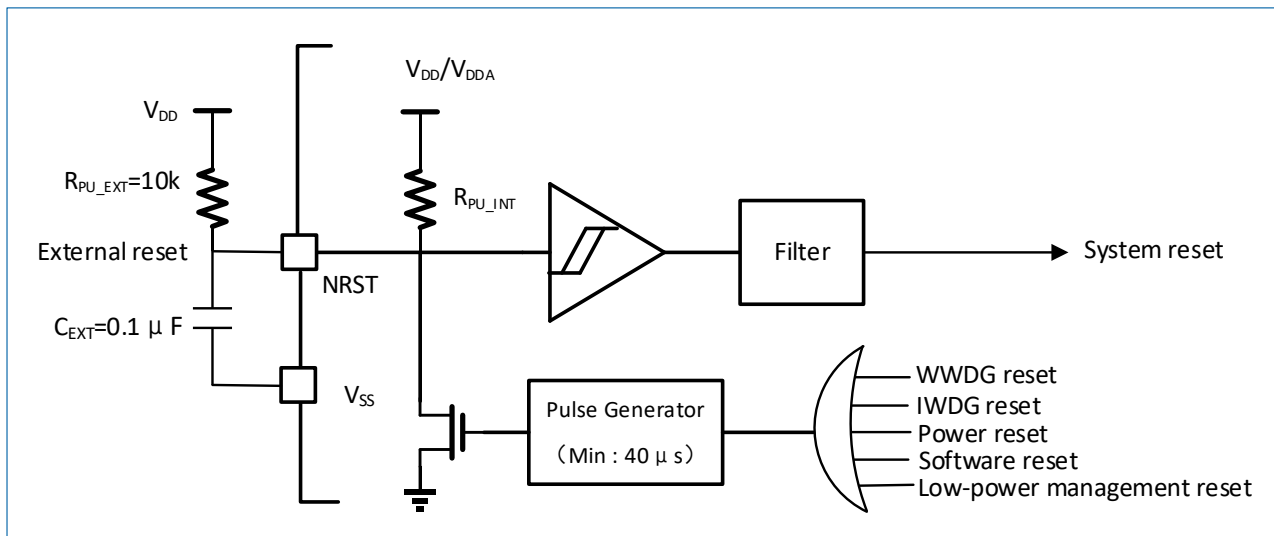

Figure 3-3 System reset

HK32F030M MCU embeds POR/PDR circuits. The circuits always operate to ensure the system runs well when the power supply is over the threshold of POR/PDR. When V_{DD} is less than the POR/PDR threshold, MCU resets and no external reset circuit is required.

3.7 Clock

HK32F030M selects a system clock when it starts. When it resets, 32MHz HSI RC is selected by default, and then the LSI clock can be selected as the CPU clock.

HK32F030M provides LSI or a GPIO input as a clock source for the low-power and low-cost design scheme.

3.7.1 Clock source

Table 3-5 clock sources

HSI oscillator	<ul style="list-style-type: none"> • Frequency: 32 MHz • Accuracy: full temperature range $\pm 1\%$
LSI clock	<ul style="list-style-type: none"> • Frequency: 114 kHz • Accuracy: full temperature range $\pm 4\%$
GPIO input clock	EXTCLK1/EXTCLK2/EXTCLK3/EXTCLK4 (up to 32 MHz)

3.7.2 Clock tree

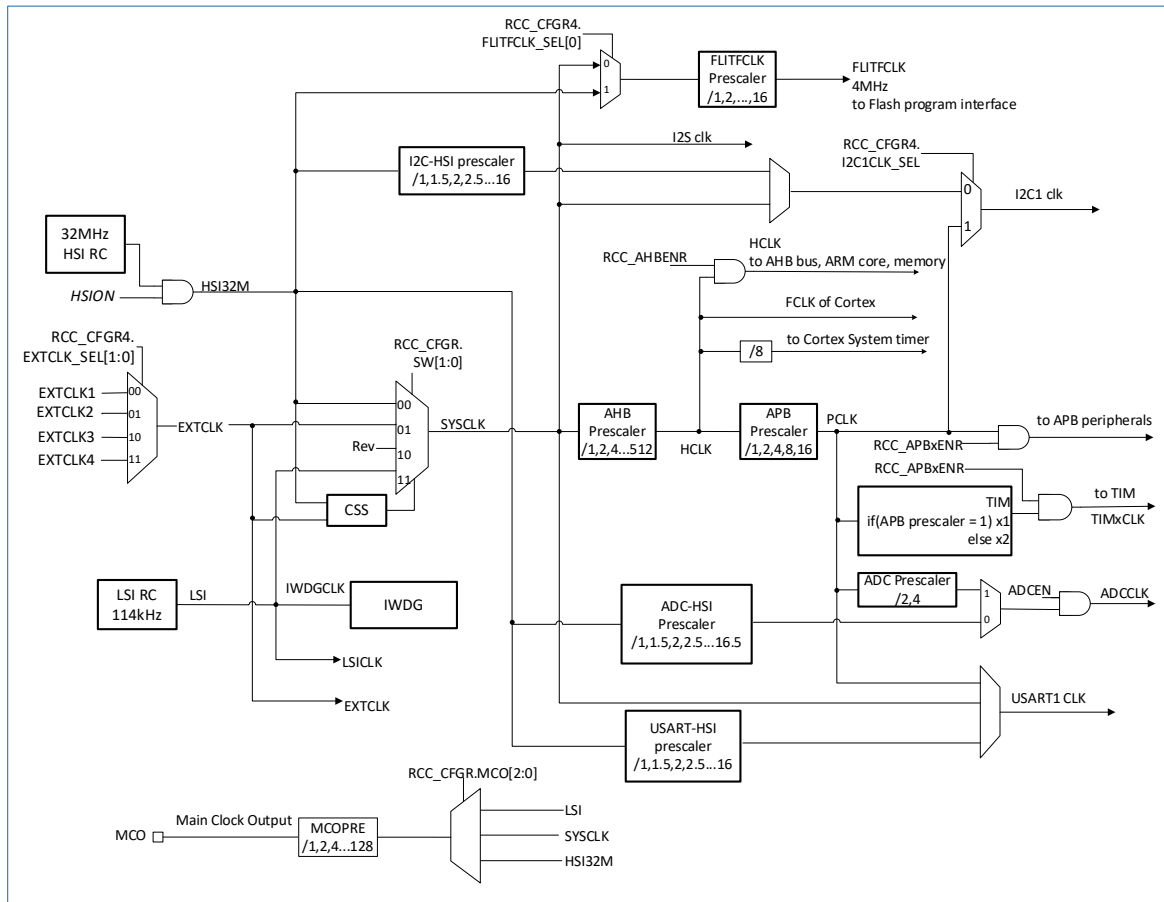

Figure 3-4 clock tree

- SYSCLK: chosen from HSI32M, LSI, or GPIO. HSI32M is chosen by default.
- HCLK: AHB prescale factor is set as “6” by default.
- FLITFCLK: HSI32M or SYSCLK clock
- The frequency threshold of the GPIO input clock for CSS detection is adjustable.

3.8 Power Supply schemes

HK32F030M adopts a single power supply, V_{DD} and V_{DDA} multiplex the same pin to supply power for digital and analog circuits. V_{DD} and V_{DDA} are in the range of 1.8 to 3.6 V.

3.9 Low-power modes

HK32F030M supports several low-power modes to achieve the best compromise between low power consumption, short startup time, and available wakeup sources.

- Sleep mode

In Sleep mode, only the CPU is stopped. All peripherals continue to operate and can wake up the CPU when an interrupt/event occurs.

- Deep Sleep mode

In Deep Sleep mode, the system clock reduces to 114 kHz for saving power. In this mode, only the CPU is stopped. All peripherals continue to operate and can wake up the CPU when an interrupt/event occurs. The power consumption in Deep Sleep mode is higher than that in Stop mode.

- Stop mode

Stop mode achieves the lowest power consumption while retaining the content of SRAM and registers. In Stop

mode, all internal clocks and HSI oscillators are disabled. MCU can be woken up from Stop mode by any EXTI line. The EXTI line source can be any one of the external I/O pins.

Table 3-6 operation modes and power consumption

Operation mode	Power consumption	Wake-up time
Run mode	Dynamic power consumption: 2.338mA@32MHz@3.3V(73μA/MHz)	-
Sleep mode	Dynamic power consumption: 1.197mA@32MHz@3.3V(35μA/MHz)	21 ns
Deep Sleep mode	Static power consumption: 0.613mA@114 kHz @3.3V	7.8 μs (Min)
Stop mode	Static power consumption: 30.12 μA @3.3V	10 μs

Table 3-7 shows the conditions of entering and exiting low-power modes.

Table 3-7 conditions of entering and exiting low-power modes

Operation mode	Entering the low-power mode	Wake-up condition
Sleep mode	To set: 1. PWR_CR: LPDS = 0. 2. Perform WFI/WFE command by software.	Any IRQ interrupt/event, including SysTick timer.
Deep Sleep mode	To set: 1. Switch the system clock to LSI. 2. PWR_CR: LPDS = 0. 3. Perform WFI/WFE command by software.	Any IRQ interrupt/event, including SysTick timer.
Stop mode	To set: 1. PWR_CR:LPDS = 1; 2. Set the SLEEPDEEP bit in the Cortex-M0 system control register. 3. Perform WFI/WFE command by software.	<ul style="list-style-type: none"> Any EXTI line Supports ADC sampling driven by the beeper while MCU is pre-woken up. Wake-up occurs when the conditions are met. AWU timer

3.10 Independent Watchdog

Independent watchdog (IWDG) is based on a 12-bit down counter and an 8-bit prescaler. The IWDG is clocked by an internal independent RC oscillator (LSI). Because it is independent from the main clock, IWDG can operate in Stop mode. It can be used as a watchdog to reset the system when a problem occurs, or as a free running timer for application timeout management. IWDG can be configured as a software or hardware watchdog through Option bytes. In debug mode, the counter can be frozen.

3.11 Window Watchdog

Window watchdog (WWDG) is based on a 7-bit down counter. The counter can be set to the free running mode, or used as a watchdog to reset the system when a problem occurs. It is clocked by the main clock and has an early warning interrupt capability. In debug mode, the counter can be frozen.

3.12 SysTick Timer

The SysTick timer is dedicated to the operation system as a standard down counter. It features:

- 24-bit down counter
- Auto-reload capability
- Generate a maskable interrupt when the counter reaches 0.
- Programmable clock source

3.13 Basic Timer

HK32F030M integrates a basic timer (TIM6).

The basic timer embeds a 16-bit counter and a 16-bit prescaler. It supports up, down, and up/down counting. The basic timer is used to generate a CPU interrupt request at a fixed time. In debug mode, the counter can be frozen.

3.14 General-purpose Timer

HK32F030M integrates a synchronous 4-channel general-purpose timer (TIM2).

The general-purpose timer is used to generate a PWM output, or as a simple time base. TIM2 is based on a 16-bit auto-reload up/down counter and a 16-bit prescaler. In debug mode, the counter can be frozen.

TIM2 can cooperate with advanced timers through the Timer Linking feature for synchronization and event chaining. TIM2 is capable of handling quadrature (incremental) encoder signals and the digital outputs from 1 to 3 hall-effect sensors.

3.15 Advanced Timer

HK32F030M integrates an advanced timer (TIM1).

The advanced timer can be taken as a three-phase PWM on 6 channels, and work as a complete general-purpose timer. The 4 independent channels can be used for:

- Input capture
- Output compare
- PWM generation (edge or center-aligned modes)
- One-pulse mode output
- Complementary PWM outputs with programmable inserted dead-times

If configured as a standard 16-bit timer, TIM1 has the same functions as the general-purpose timer. If configured as a 16-bit PWM generator, it has full modulation capability (0-100%). Because most of its internal structure is the same as that of a general-purpose timer, the advanced timer can work together with general-purpose timers via Timer Link feature for synchronization or event chaining. In debug mode, the counter can be frozen.

3.16 AWU Timer

HK32F030M integrates an automatic wake-up timer (AWU). The AWU timer can count and generate an interrupt to wake up MCU from Stop mode. The AWU timer embeds an ultra-low power 22-bit timer. Its operation clock can be configured as 1 to 32MHz HSE, or 114 kHz LSI. The AWU timer counts down.

3.17 Beeper

The beeper embeds an ultra-low power 7-bit timer. The clock of the timer can be configured as HSE from 1 to 32 MHz, or 114 kHz LSI. The counter counts down and outputs pulses at a frequency of 1, 2, 4, or 8 kHz.

In Stop mode, the beeper continues to work and triggers ADC sampling at a fixed time. The frequency that can trigger ADC sampling is the frequency of the beeper divided by 1024. For example, if the beeper outputs 1 kHz pulses, the frequency for triggering ADC sampling is $1\text{ kHz}/1024 \approx 0.98\text{ Hz}$ (the period is about 1.02 s).

3.18 I2C Bus

The I2C bus interface can work as a master or a slave, and supports standard or fast mode. The I2C interface supports 7-bit or 10-bit addressing mode. In 7-bit slave mode, it supports double-slave address addressing. The I2C interface embeds a hardware CRC generator/checker, and supports SMBus V2.0/PMBus.

3.19 USART

HK32F030M embeds a universal synchronous/asynchronous receiver transmitter (USART). Its communication rate can reach 4 Mbit/s.

The USART supports multi-processor communication, master synchronous communication, and single-wire half-duplex communication mode.

The USART interface provides Smart Card mode (ISO 7816 compliant), IrDA SIR ENDEC support, and LIN Master/Slave capability and automatic Baud rate detection.

The USART interface can use a clock independent from the CPU clock, to wake up MCU in Stop mode.

Table 3-8 USART features

features	USART
DMA continuous transmission	No
Multi-processor communication	Yes
Synchronous mode	Yes
Single-wire half-duplex communication	Yes
Dual clock domain and wake up from Stop mode	Yes
Auto-baudrate detection	Yes
ModBus communication	Yes
RS232 hardware flow control	No
RS485 driver enable	No
IrDA SIR ENDEC	Yes
LIN mode	Yes
Smart Card mode	Yes

3.20 SPI

HK32F030M has an SPI interface, up to 16 Mbit/s communication speed and supports Master/Slave mode, full-duplex, and half-duplex communication modes. The 3-bit prescaler gives 8 master mode frequencies. Each frame can be configured to 4 to 16 bits.

The standard I2S interface (multiplexed with SPI) supports 4 different audio standards and master/slave half-duplex communication mode. The I2S interface can be configured to 16/24/32 bits transmission mode, and operates with 16/32 bits resolution. Audio sampling frequencies from 8 kHz up to 192 kHz are supported. In master mode, the I2S interface can output the master clock to the external DAC/CODEC at frequency of 256 times the sampling frequency.

Table 3-9 SPI features

Features	SPI
Hardware CRC computation	Yes
RX/TX FIFO	Yes
NSS pulse mode	Yes
I2S mode	Yes
TI mode	Yes

3.21 GPIO

Each GPIO pin can be configured by software as output (push-pull/open-drain), input (floating/pull-up/pull-down), or any peripheral alternate functional interface. Most of the GPIO pins are shared with digital or analog

alternate functional. All GPIOs are high current capable. The I/Os alternate function configuration can be locked to avoid spurious writing to the I/O registers.

3.22 ADC

The ADC features of HK32F030M include:

- There are 6 channels in total. AIN0 to AIN4 are external channels connecting to I/Os, AIN5 is an internal channel connecting to the internal reference voltage.
- Supports differential input mode. AIN0 and AIN1, AIN2 and AIN3 consist of two pairs of differential inputs (In differential mode, AIN4 and AIN5 are disabled).
- Only supports 12-bit ADC sampling resolution.

3.22.1 ADC External trigger source

Table 3-10 ADC external trigger sources

Name	Source	External trigger selection mode (EXTSEL[2:0])
TRG0	TIM1_TRGO	000
TRG1	TIM1_CC4	001
TRG2	TIM2_TRGO	010
TRG3	TIM6_TRGO	011
TRG4	TIM1_CC1	100
TRG5	TIM1_CC2	101
TRG6	TIM1_CC3	110
TRG7	IO_TRIG	111

IO_TRIG can be triggered by any IO. You need to configure the MODER and AFR registers for the IO. Please refer to “Section 3.5 GPIO Registers” in HK32F030M Reference Manual for details.

3.22.2 AWD wake-up function

In Stop mode, system timing is controlled by the beeper, and the beeper sends a signal to ADC; ADC samples the signal to wake up the ADC clock. The ADC clock gets ready to trigger ADC conversions and generates an AWD event according to ADC conversion results. An AWD event is output to an EXTI line to wake up the system.

When applying this function, you need to configure the ADC_CR2.WAKE_EN register, and the timing controller in the beeper, as well as AWD-related thresholds and channels.

3.23 64-bit UID

A 64-bit unique identification (UID) provides a reference number for each HK32F030M SOC. In any circumstance, the ID is unique. Users are unable to change it. According to different applications, the 64-bit UID can be read in a unit of byte (8 bits), half-word (16 bits), or word (32 bits). The 64-bit UID is fit for the following applications:

- Used as a part number (for example, as a USB character list number or other terminal applications)
- Used as a keyword. When programming the Flash, use the UID with software encryption and decryption algorithm to improve security of the code in the Flash.
- To activate the boot process of the security mechanism.

3.24 Debug Interface

Build-in ARM SWJ-DP interface, which is combined with a single wire debug interface, to realize the connection between serial single wire debug interfaces (SWDIO and SWCLK).

4 Electrical characteristics

4.1 Absolute maximum values

Note:

- Stresses above the absolute maximum rating listed in [Table 4-1](#) and [Table 4-18](#) can cause permanent damage to the device.
- Exposure to maximum permitted conditions for exceeded periods can affect device reliability.

4.1.1 Voltage characteristics

Table 4-1 Voltage characteristics

Symbol	Description	Min	Max	Unit
$V_{DD}-V_{SS}$	External main supply voltage (including V_{DDA} and V_{DD})	-0.5	4.0	V
V_{IN}	Input voltage on pins	$V_{SS} - 0.3$	$V_{DD} + 4.0$	
$ \Delta V_{DDx} $	Variation between different V_{DD} Power pins	-	50	mV
$ V_{SSx} - V_{SS} $	Variation between different V_{DD} ground pins	-	50	

4.1.2 Current characteristics

Table 4-2 Current characteristics

Symbol	Description	Max	Unit
I_{VDD}	Total current into V_{DD}/V_{DDA} power lines (source) ⁽¹⁾	150	mA
I_{VSS}	Total current out of V_{SS} ground lines (sink) ⁽¹⁾	150	
I_{IO}	Output current sunk by any I/O and control pin	25	
	Output current source by any I/O and control pin	-25	
$I_{INJ(PIN)}^{(2)}$	Injected current on pins ⁽³⁾	± 5	
$\Sigma I_{INJ(PIN)}$	Total injected current (sum of all I/O and control pin) ⁽⁴⁾	± 25	

- All main power (V_{DD} , V_{DDA}) and Ground (V_{SS} , V_{SSA}) pins must always be connected to the external power supply, in the permitted range.
- Negative injected current disturbs the analog performance of the device.
- When $V_{IN} > V_{DD}$, a positive injected current is induced. When $V_{IN} < V_{SS}$, a negative injected current is induced, and the injected current must be limited to the permitted range.
- When several I/Os are submitted to a current injection, the maximum $\Sigma I_{INJ(PIN)}$ is the absolute sum of the positive and negative injected currents (instantaneous values).

4.1.3 Thermal characteristics

Table 4-3 Thermal characteristics

Symbol	Description	Value	Unit
T_{STG}	Storage temperature range	-45 ~ +150	°C
T_J	Maximum junction temperature	125	

4.2 Operation conditions

4.2.1 General operation conditions

Table 4-4 General operation conditions

Symbol	Description	Min	Max	Unit
f _{HCLK}	Internal AHB clock frequency	0	32	MHz
f _{PCLK}	Internal APB clock frequency	0	32	
V _{DD} /V _{DDA}	Standard operating voltage / Analog operating voltage ⁽¹⁾	1.8	3.6	V
T	operating temperature	-40	85	°C

(1). All main power (V_{DD} and V_{DDA}) pins must always be connected to the external power supply. It is recommended to add a filter capacitor.

4.2.2 Reset detection

Table 4-5 Reset detection

Symbol	Description	Conditions	Min	Typ	Max	Unit
T _{delay}	RSTN build-up time	-	-	40	-	μs
V _{Threshold}	Reset threshold	-	-	1.75	-	V

4.2.3 POR/PDR characteristics

Table 4-6 POR/PDR characteristics

Symbol	Description	Conditions	Min	Typ	Max	Unit
V _{POR/PDR} ⁽¹⁾	Power on/power down reset threshold	Falling edge ⁽²⁾	1.8	1.88	1.96 ⁽³⁾	V
		Rising edge	1.84 ⁽³⁾	1.92	2.00	V
V _{PDRhyst}	PDR hysteresis	-	-	40	-	mV
t _{RSTTEMPO} ⁽³⁾	Reset temporization	-	1.50	2.50	4.50	ms

(1) PDR circuit monitors V_{DD} and V_{DDA}, POR circuit monitors only V_{DD}.

(2) Product-tested values is less than the minimum V_{POR/PDR} value.

(3) Guaranteed by design, not tested in production.

4.2.4 Embedded reference voltage

Table 4-7 Embedded reference voltage

Symbol	Description	Conditions	Min	Typ	Max	Unit
V _{REFINT}	Internal reference voltage	-40 ~ 85°C	-	0.8	-	V

4.2.5 Operating current

Table 4-8 Operating current characteristics

Mode	Conditions	VDD=3.3V			Unit
		-40° C	25° C	85° C	
Run mode	HCLK = HSI (32 MHz), 1 wait period for Flash read operation. APB clock is enabled.	2.572	2.599	2.704	mA
	HCLK = HSI (32 MHz), 1 wait period for Flash read operation. APB	2.326	2.338	2.501	mA

Mode	Conditions	VDD=3.3V			Unit
		-40° C	25° C	85° C	
	clock is disabled.				
	HCLK =LSI (114 kHz)	1.802	1.711	1.822	mA
Sleep mode	HCLK = HSI (32 MHz), APB clock is disabled.	1.097	1.197	1.477	mA
Deep Sleep mode	HCLK = HSI (32 MHz), APB clock is disabled.	0.548	0.613	0.728	mA
Stop mode	Low-power state (supports automatic wake-up and LDO)	21.83	34.08	213.6	μA
	Low-power state (supports LDO)	18.02	30.12	210.44	μA

4.2.6 High-speed internal (HSI) RC oscillator

Table 4-9 HSI RC oscillator characteristics

Symbol	Description	Conditions	Min	Typ	Max	Unit
f _{HSI}	Frequency	-	-	32	-	MHz
DuCy _(HSI)	Duty cycle	-	45	-	55	%
ACC _(HSI)	Accuracy of the HSI oscillator	User-trimmed with the RCC_CR register	-	-	1	
		Factory calibrated: T _A = -40 ~ +85°C	-1	-	1	%
T _{SU(HSI)}	HSI oscillator startup time	V _{SS} ≤ V _{IN} ≤ V _{DD}	1	-	2	μs
I _{DD(HSI)}	HSI oscillator power consumption	-	-	80	100	μA

4.2.7 Low-speed internal (LSI) RC oscillator

Table 4-10 LSI RC oscillator characteristics

Symbol	Description	Conditions	Min	Typ	Max	Unit
f _{LSI}	Frequency	-	-	114	-	kHz
DuCy _(LSI)	Duty cycle	-	45	-	55	%
ACC _(LSI)	Accuracy of the LSI oscillator	Factory setting: T _A = -40 ~ +85 °C	1.5	-	2.2	
T _{SU(LSI)}	LSI oscillator startup time	V _{SS} ≤ V _{IN} ≤ V _{DD}	1	-	2	μs
I _{DD(LSI)}	LSI oscillator power consumption	-	-	80	100	μA

4.2.8 GPIO input clock

HK32F030M is clocked from EXTCLK1/EXTCLK2/EXTCLK3/EXTCLK4 input clock.

Table 4-11 GPIO input clock characteristics

Symbol	Description	Value			Unit
		Min	Typ	Max	
F _{ext}	Input clock frequency	1	8.0	32	MHz
	Input clock duty	40	-	60	%
Jitter	Cycle-to-cycle jitter	-	-	300	ps

4.2.9 Flash memory characteristics

Table 4-12 Flash memory characteristics

Symbol	Description	Min	Typ	Max	Unit
T _{PROG}	A byte programming time	-	30	-	μs
T _{ERASE}	Page erase time	30	40	50	ms
	Mass erase time	30	40	50	ms
I _{DDPROG}	A byte programming current	-	-	5	mA
I _{DDERASE}	Page/mass erase time	-	-	2	mA
I _{DDREAD}	Supply current@24MHz (read mode)	-	2	3	mA
	Supply current@1MHz (read mode)	-	0.25	0.4	mA
N _{END}	Endurance	100	-	-	kcycles
t _{RET}	Data retention	10	-	-	year

4.2.10 I/O port characteristics

Table 4-13 I/O static characteristics

Symbol	Description	Conditions	Min	Typ	Max	Unit
V _{IH}	Input high level voltage	V _{DD} = 3.3 V	1.65@without Schmitt 1.75@with Schmitt			V
V _{IL}	Input low level voltage	-	-0.3		1.60@ with Schmitt 1.45@ without Schmitt	V
V _{hys}	Schmitt trigger voltage hysteresis	-	450	-	-	mV
I _{lkg}	Input leakage current	V _{IN} = 3.3 V	-	-	3	μA
R _{PU}	Weak pull-up equivalent resistor	V _{IN} = V _{SS}	30	40	50	KΩ
R _{PD}	Weak pull-down equivalent resistor	V _{IN} = V _{DD}	30	40	50	KΩ
C _{IO}	I/O pin capacitance	-	-	5	-	pF

4.2.11 Output voltage characteristics

Table 4-14 Output voltage characteristics

Symbol	Description	Conditions	Min	Max	Unit
V _{OL}	Output low level voltage	V _{DD} =3.3V I _{OL} =-8mA	0	0.8	V
V _{OH}	Output high level voltage	V _{DD} =3.3V I _{OH} =8mA	2.4	3.3	
V _{OL}	Output low level voltage	V _{DD} =3.3V I _{OL} =-20mA	0	0.8	
V _{OH}	Output high level voltage	V _{DD} =3.3V I _{OH} =20mA	2.4	3.3	

Table 4-15 Output voltage AC characteristics

Mode	Symbol	Description	Conditions	Min	Max	Unit
10	f _{max(I/O)out}	Max frequency	CL = 50 pF, V _{DD} = 2V ~	-	2	MHz

Mode	Symbol	Description	Conditions	Min	Max	Unit
01	$t_{f(I/O)out}$	Output high to low level fall time	3.6V	-	125	ns
	$t_{r(I/O)out}$	Output low to high level rise time		-	125	
	$f_{max(I/O)out}$	Max frequency	CL = 50 pF, VDD = 2 V ~ 3.6 V	-	10	MHz
	$t_{f(I/O)out}$	Output high to low level fall time		-	25	ns
	$t_{r(I/O)out}$	Output low to high level rise time		-	25	
11	$f_{max(I/O)out}$	Max frequency	CL = 50 pF, VDD = 2.7 V ~ 3.6 V	-	50	MHz
	$t_{f(I/O)out}$	Output high to low level fall time	CL = 50 pF, VDD = 2.7 V ~ 3.6 V	-	5	ns
	$t_{r(I/O)out}$	Output low to high level rise time	CL = 50 pF, VDD = 2.7 V ~ 3.6 V	-	5	ns

4.2.12 NRST pin characteristics

The NRST pin is connected to a pull-up resistor. Its peripheral application circuit might connect to an external RC circuit or no circuit.

Table 4-16 NRST pin characteristics

Symbol	Description	Min	Max	Unit
V_{IL}	NRST input low level voltage	-	0.8	V
V_{IH}	NRST input high level voltage	2	-	V
V_{hys}	Schmitt trigger voltage hysteresis	-	200	mV
R_{pull}	Weak pull-up equivalent resistor	-	50	K
T_{Noise}	Low level is neglected	-	100	ns

4.2.13 TIM timer characteristics

Table 4-17 TIM characteristics

Symbol	Description	Min	Max	Unit
$T_{res(TIM)}$	Timer resolution time	1	-	$T_{TIMxCLK}$
F_{EXT}	Timer external clock frequency on CH1 to CH4	0	$F_{TIMxCLK}/2^{(1)}$	MHz
Res_{TIM}	Timer resolution	-	16	bit
$T_{counter}$	16-bit counter clock period when selecting an internal clock	1	65536	$T_{TIMxCLK}$
T_{MAX_COUNT}	Maximum possible count	-	65536 x 65536	$T_{TIMxCLK}$

(1). $f_{TIMxCLK} = 32$ MHz

4.2.14 ADC characteristics

Table 4-18 ADC characteristics

Symbol	Description	Conditions	Min	Typ	Max	Unit
V_{DD}	ADC power supply	-	2	3.3	3.6	V
f_{ADC}	ADC clock frequency	-	0.6	-	14	MHz
f_s	Sampling frequency	-	0.05	-	1	MHz
f_{TRIG}	External trigger frequency	$f_{ADC} = 14$ MHz	-	-	823	kHz
		-	-	-	17	$1/f_{ADC}$

Symbol	Description	Conditions	Min	Typ	Max	Unit
V _{AIN}	Conversion voltage range	-	0	-	V _{DD}	V
R _{AIN}	External input impedance	-	-	-	50	kΩ
R _{ADC}	Sampling switch resistance	-	-	-	1	kΩ
C _{ADC}	Internal sample and hold capacitor	-	-	-	5	pF
t _{CAL}	ADC calibration time	f _{ADC} = 14 MHz	5.9			μs
		-	8.3			1/f _{ADC}
t _{latr}	Regular trigger conversion latency	f _{ADC} = 14 MHz	-	-	0.143	μs
		-	-	-	2	1/f _{ADC}
t _s	Sampling rate	f _{ADC} = 14 MHz	0.107		17.1	μs
		-	1.5		239.5	1/f _{ADC}
t _{STAB}	Power-up time	-	0	0	1	μs
t _{CONV}	Total conversion time (including sampling time)	f _{ADC} = 14 MHz	1	-	18	μs
		-	14 to 252 (t _s for sampling +12.5 for successive approximation)			1/f _{ADC}
ADC resolution	12-bit (8 bits valid)	-	-			-

5 Typical circuitry

5.1 Power supply scheme

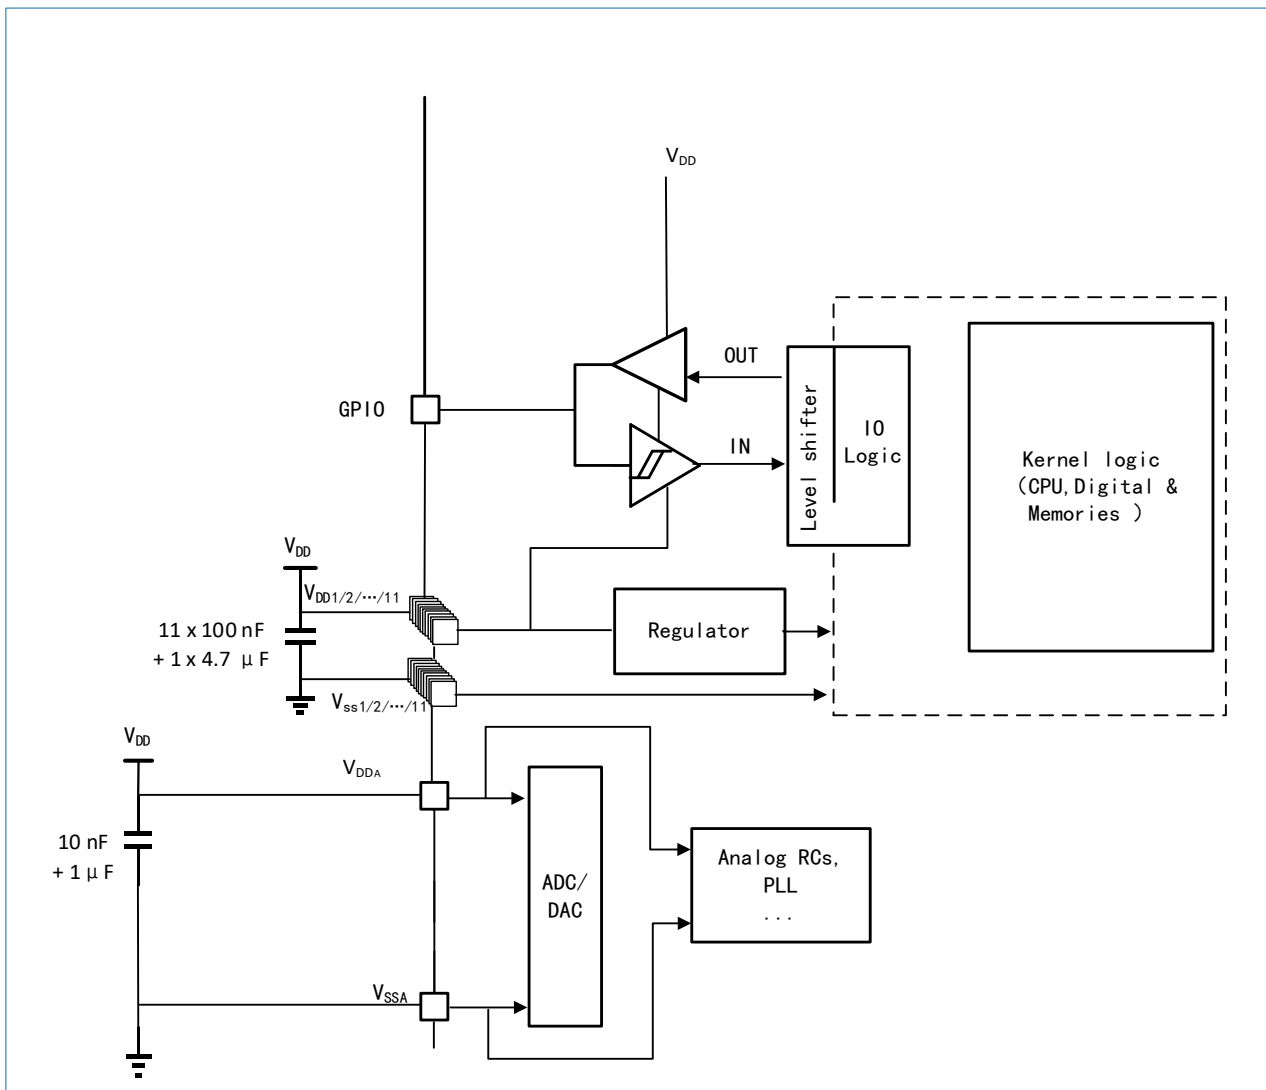

Figure 5-1 Power Supply scheme

6 Pinouts and pin descriptions

HF32F030M is available in four packages: SOP8, TSSOP16, TSSOP20, and QFN20.

6.1 SOP8

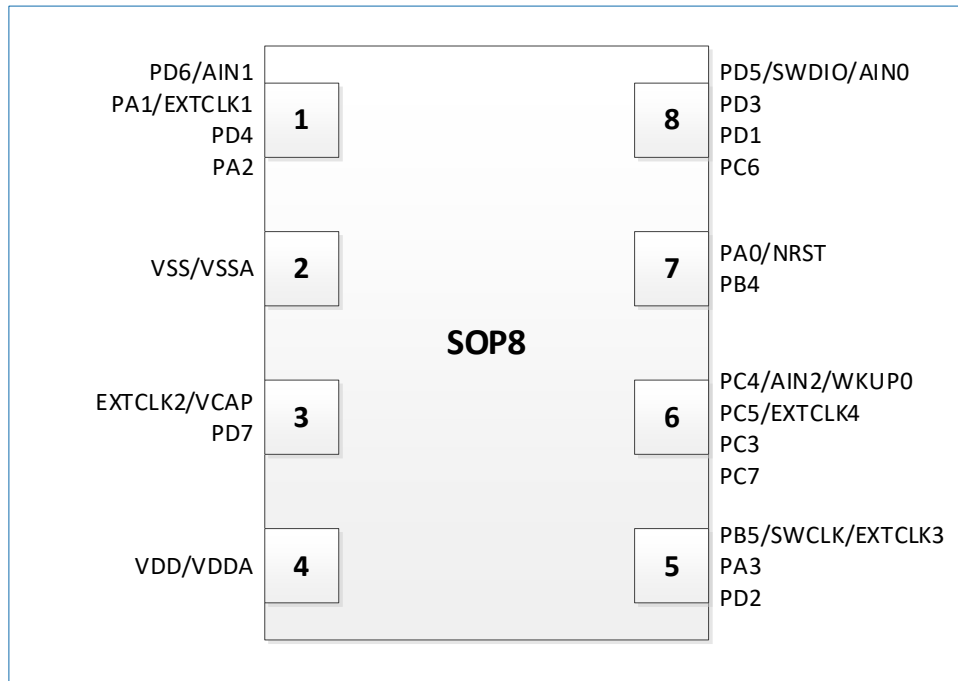

Figure 6-1 SOP8 package pinout

Table 6-1 shows pin description of SOP8 package.

Table 6-1 SOP8 pin descriptions

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
1	PD6/AIN1 ⁽²⁾	I/O	PD6 GPIO	-
	PA1/HSECLK1	I/O	PA1	-
	PD4	I/O	PD4 GPIO	I2C_SMBA
	PA2	I/O	PA2	I2C_SMBA
2	VSS/VSSA	S	The Digital ground / the analog ground	
3	VCAP/PD7/HSECLK2	I/O	PD7	I2C_SMBA
4	VDD/VDDA	S	The Digital power supply/the analog power supply	
5	PB5/SWCLK/HSECLK3	I/O	SWCLK after reset	SWCLK_I2C_SDA ⁽³⁾
	PA3	I/O	PA3	-
	PD2	I/O	PD2	-
6	PC4/AIN2 ⁽²⁾	I/O	PC4	-
	PC5/HSECLK4	I/O	PC5	I2C_SDA
	PC3	I/O	PC3	-
	PC7	I/O	PC7	-
7	NRST/PA0	I/O	NRST	-
	PB4	I/O	PB4	I2C_SCL
8	PD5/SWDIO/AIN0 ⁽²⁾	I/O	SWDIO	SWDIO

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
	PD3	I/O	PD3	-
	PD1	I/O	PD1	I2C_SMBA
	PC6	I/O	PC6	I2C_SCL

- (1). I= input, O=output, I/O= input/output, S=supply.
- (2). AIN0 ~ AIN2 has the ADC analog input capability.
- (3). PB5 combined with extra registers configuration to enable SWCLK or I2C_SDA.

6.2 TSSOP16

Figure 6-2 TSSOP16 package pinout

Table 6-2 shows pin description of TSSOP16 package.

Table 6-2 TSSOP16 pin descriptions

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
1	PD6/AIN1 ⁽²⁾	I/O	PD6 GPIO	-
	PD4	I/O	PD4 GPIO	I2C_SMBA
2	NRST/PA0	I/O	NRST	-
3	PA1/HSECLK1	I/O	PA1	-
4	PA2	I/O	PA2	I2C_SMBA

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
5	VSS/VSSA	S	The Digital ground / the analog ground	
6	VCAP/PD7/HSECLK2	I/O	PD7	I2C_SMBA
7	VDD/VDDA	S	The Digital power supply/the analog power supply	
8	PA3	I/O	PA3	-
9	PB5/SWCLK/HSECLK3	I/O	SWCLK after reset	SWCLK_I2C_SDA ⁽³⁾
	PD2	I/O	PD2	-
10	PB4	I/O	PB4	I2C_SCL
11	PC3	I/O	PC3	-
12	PC4/AIN2 ⁽²⁾	I/O	PC4	-
	PC7	I/O	PC7	-
13	PC5/HSECLK4	I/O	PC5	I2C_SDA
14	PC6	I/O	PC6	I2C_SCL
15	PD5/SWDIO/AIN0 ⁽²⁾	I/O	SWDIO	SWDIO
	PD1	I/O	PD1	I2C_SMBA
16	PD3/AIN3 ⁽²⁾	I/O	PD3	-

(1). I= input, O=output, I/O= input/output, S=supply.

(2). AIN0 ~ AIN3 has the ADC analog input capability.

(3). PB5 combined with extra registers configuration to enable SWCLK or I2C_SDA.

6.3 TSSOP20

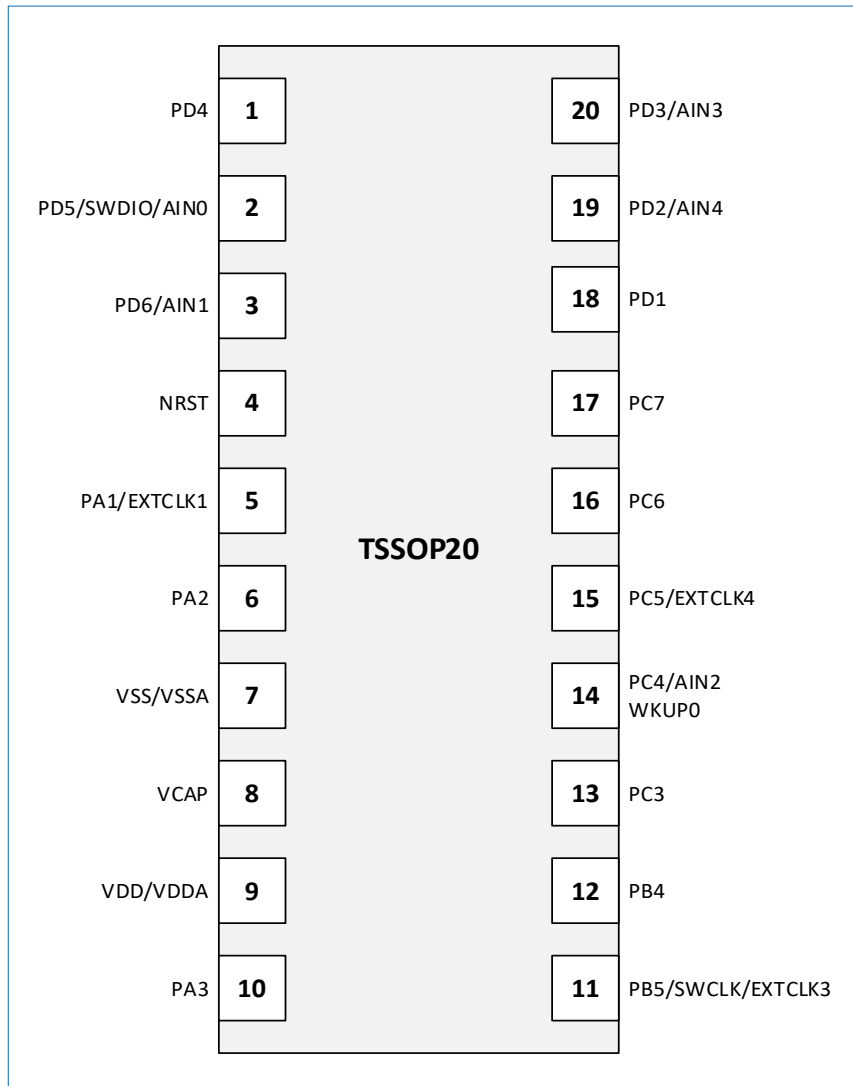

Figure 6-3 TSSOP20 package pinout

Table 6-3 shows pin description of TSSOP20 package.

Table 6-3 TSSOP20 pin descriptions

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
1	PD4	I/O	PD4 GPIO	I2C_SMBA
2	PD5/SWDIO/AIN0 ⁽²⁾	I/O	SWDIO	SWDIO
3	PD6/AIN1	I/O	PD6 GPIO	-
4	NRST	I	NRST Input	-
5	PA1/HSECLK1	I/O	PA1	-
6	PA2	I/O	PA2	I2C_SMBA
7	VSS/VSSA	S	The Digital ground / the analog ground	
8	VCAP	O	NC, Floating	
9	VDD/VDDA	S	The Digital power supply/the analog power supply	
10	PA3	I/O	PA3	-

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Function	
			Default Function	Alternate functions
11	PB5/SWCLK/HSECLK3	I/O	SWCLK after reset	SWCLK_I2C_SDA ⁽³⁾
12	PB4	I/O	PB4	I2C_SCL
13	PC3	I/O	PC3	-
14	PC4/AIN2 ⁽²⁾	I/O	PC4	-
15	PC5/HSECLK4	I/O	PC5	I2C_SDA
16	PC6	I/O	PC6	I2C_SCL
17	PC7	I/O	PC7	-
18	PD1	I/O	PD1	I2C_SMBA
19	PD2/AIN4 ⁽²⁾	I/O	PD2	-
20	PD3/AIN3 ⁽²⁾	I/O	PD3	-

(1). I= input, O=output, I/O= input/output, S=supply.

(2). AIN0 ~ AIN4 has the ADC analog input capability.

(3). PB5 combined with extra registers configuration to enable SWCLK or I2C_SDA.

6.4 QFN20

Figure 6-4 QFN20 package pinout

Table 6-4 shows pin description of QFN20 package.

Table 6-4 QFN20 pin descriptions

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Functions	
			Default Functions	Alternate functions
1	NRST	I	NRST Input	-
2	PA1/HSECLK1	I/O	PA1	-
3	PA2	I/O	PA2	I2C_SMBA
4	VSS/VSSA	S	The Digital ground / the analog ground	
5	VCAP	O	NC, Floating	-
6	VDD/VDDA	S	The Digital power supply/the analog power supply	
7	PA3	I/O	PA3	-
8	PB5/SWCLK/HSECLK3	I/O	SWCLK after reset	SWCLK_I2C_SDA ⁽³⁾
9	PB4	I/O	PB4	I2C_SCL

Pin #	Pin Name	Pin Type ⁽¹⁾	Pin Functions	
			Default Functions	Alternate functions
10	PC3	I/O	PC3	-
11	PC4/AIN2 ⁽²⁾	I/O	PC4	-
12	PC5/HSECLK4	I/O	PC5	I2C_SDA
13	PC6	I/O	PC6	I2C_SCL
14	PC7	I/O	PC7	-
15	PD1	I/O	PD1	I2C_SMBA
16	PD2/AIN4 ⁽²⁾	I/O	PD2	-
17	PD3/AIN3 ⁽²⁾	I/O	PD3	-
18	PD4	I/O	PD4 GPIO	I2C_SMBA
19	PD5/SWDIO/AIN0 ⁽²⁾	I/O	SWDIO	SWDIO
20	PD6/AIN1 ⁽²⁾	I/O	PD6 GPIO	-

(1). I= input, O=output, I/O= input/output, S=supply.

(2). AIN0 ~ AIN4 has the ADC analog input capability.

(3). PB5 combined with extra registers configuration to enable SWCLK or I2C_SDA.

6.5 Pin Alternate functions

Table 6-5 Pin Alternate functions

Pin Name	AF0 (I2C/SWD)	AF1 (USART)	AF2 (SPI/I2S)	AF3 (TIM1)	AF4 (TIM2)	AF5 (RCC)	AF6 (Beeper)	AF7 (ADC)
PA0	Reserved	Reserved	Reserved	TIM1_BKIN	TIM2_CH3	RCC_MCO	BEEP	ADC_ETR
PA1	Reserved	Reserved	Reserved	TIM1_CH1N	TIM2_ETR	RCC_MCO	BEEP	ADC_ETR
PA2	I2C_SMBA	Reserved	SPI_SCK/ I2S_CK	TIM1_CH2N	TIM2_CH4	RCC_MCO	BEEP	ADC_ETR
PA3	Reserved	USART_TX	SPI_NSS/ I2S_WS	TIM1_CH3N	TIM2_CH3	RCC_MCO	BEEP	ADC_ETR
PB4	I2C_SCL	USART_RX	SPI_MISO/ I2S_MCK	TIM1_CH2N	TIM2_ETR	RCC_MCO	BEEP	ADC_ETR
PB5	SWCLK_I2C_SDA ⁽¹⁾	USART_RX	SPI_NSS/ I2S_WS	TIM1_BKIN	TIM2_CH2	RCC_MCO	BEEP	ADC_ETR
PC3	Reserved	USART_CK	Reserved	TIM1_CH3_C H1N ⁽²⁾	TIM2_CH1	RCC_MCO	BEEP	ADC_ETR
PC4	Reserved	Reserved	SPI_MISO/ I2S_MCK	TIM1_CH4_C H2N ⁽²⁾	TIM2_CH4	RCC_MCO	BEEP	ADC_ETR
PC5	I2C_SDA	Reserved	SPI_SCK/ I2S_CK	TIM1_ETR	TIM2_CH1	RCC_MCO	BEEP	ADC_ETR
PC6	I2C_SCL	Reserved	SPI_MOSI/ I2S_SD	TIM1_CH1	TIM2_CH3	RCC_MCO	BEEP	ADC_ETR
PC7	Reserved	Reserved	SPI_MISO/ I2S_MCK	TIM1_CH2	TIM2_ETR	RCC_MCO	BEEP	ADC_ETR
PD1	I2C_SMBA	USART_TX	Reserved	TIM1_CH1	TIM2_CH4	RCC_MCO	BEEP	ADC_ETR
PD2	Reserved	Reserved	SPI_MOSI/	TIM1_CH2	TIM2_CH3	RCC_MCO	BEEP	ADC_ETR

Pin Name	AF0 (I2C/SWD)	AF1 (USART)	AF2 (SPI/I2S)	AF3 (TIM1)	AF4 (TIM2)	AF5 (RCC)	AF6 (Beeper)	AF7 (ADC)
			I2S_SD					
PD3	Reserved	Reserved	SPI_SCK/ I2S_CK	TIM1_CH3	TIM2_CH2	RCC_MCO	BEEP	ADC_ETR
PD4	I2C_SMBA	USART_CK	SPI_MOSI/ I2S_SD	TIM1_CH4	TIM2_CH1	RCC_MCO	BEEP	ADC_ETR
PD5	SWDIO	USART_TX	Reserved	TIM1_ETR	TIM2_ETR	RCC_MCO	BEEP	ADC_ETR
PD6	Reserved	USART_RX	SPI_MISO/ I2S_MCK	TIM1_CH2	TIM2_CH2	RCC_MCO	BEEP	ADC_ETR
PD7	I2C_SMBA	USART_RX	SPI_NSS/ I2S_WS	TIM1_CH3	TIM2_CH1	RCC_MCO	BEEP	ADC_ETR

- (1). PB5 is combined with the following register to select SWCLK or I2C_SDA.
- (2). PC3 and PC4 are combined with the following peripheral registers to select CH3/CH4 or CH1N/CH2N of TIM1.

bit	2	1	0
	PB5_I2C1_SEL	PC4_TIM1_SEL	PC3_TIM1_SEL
access	rw	rw	rw
reset value	0	0	0

Figure 6-5 PB5/PC4/PC3 Alternate function selection

- If PB5_AF is configured to AF0, the value of PB5_I2C_SEL is:
 - 0: PB5 is used as SWCLK input pin (the default setting when system resets).
 - 1: PB5 is used as I2C SDA pin.
- If PC4_AF is configured to AF3, the value of PC4_TIM1_SEL is:
 - 0: PC3 is used as TIM1 CH4 pin.
 - 1: PC3 is used as TIM1 CH2N pin.
- If PC3_AF is configured to AF3, the value of PC3_TIM1_SEL is:
 - 0: PC3 is used as TIM1 CH3 pin.
 - 1: PC3 is used as TIM1 CH1N pin.

6.6 IOMUX pin function remapping

TSSOP16/SOP8 package has an IOMUX pin function remapping controller. It can remap a pin to multiple GPIOs or a peripheral IO.

Take pin 8 in [Figure 6-1](#) for example to describe the pin remapping.

Table 6-6 Function mapping of the pin 8 in SOP8 package

Operation	Function of the pin 8
Chip Reset	PD5 and the peripheral IO corresponding to the SYSCFG configuration.
Configuring IOMUX registers	<ul style="list-style-type: none"> • PD3 and the peripheral IO corresponding to the SYSCFG configuration. • PD1 and the peripheral IO corresponding to the SYSCFG configuration. • PC6 and the peripheral IO corresponding to the SYSCFG configuration.

SOP8/SOP8 package can use 18 GPIOs and the IO functions of all peripheral flexibly by IOMUX configuration.

7 Package characteristics

7.1 SOP8

SOP8 is a 4.9 x 6 mm and 1.27 mm pitch package.

Figure 7-1 SOP8 package outline

Table 7-1 SOP8 package parameters

Symbol	Unit: mm		Unit: inches ⁽¹⁾	
	Min	Max	Min	Max
A	1.24	1.44	0.049	0.057
B	0.00	0.27	0.000	0.011
C	0.46	-	0.018	-
D	0.16	0.27	0.006	0.011
E	3.70	3.90	0.145	0.154
F	4.81	5.01	0.189	0.198
G	3.81		0.150	
H	5.88	6.18	0.231	0.244
J	0.35	0.52	0.013	0.021
K	1.27		0.050	

7.2 TSSOP16

TSSOP16 is a 5.0 mm x 4.4 mm and 0.65 mm pitch package.

Figure 7-2 TSSOP16 package outline

Table 7-2 TSSOP16 package parameters

Symbol	Min (mm)	Typ (mm)	Max (mm)
A	-	-	1.20
A1	0.05	-	0.15
A2	0.90	1.00	1.05
A3	0.34	0.44	0.54
b	0.20	-	0.28
b1	0.20	0.22	0.24
c	0.10	-	0.19
c1	0.10	0.13	0.15
D	4.86	4.96	5.06
E	6.20	6.40	6.60

Symbol	Min (mm)	Typ (mm)	Max (mm)
E1	4.30	4.40	4.50
e	0.65 BSC		
L	0.45	0.60	0.75
L1	1.00 REF		
L2	0.25 BSC		
R	0.09	-	-
R1	0.09	-	-
S	0.20	-	-
θ_1	0°	-	8°
θ_2	10°	12°	14°
θ_3	10°	12°	14°

7.3 TSSOP20

TSSOP20 is a 6.5 mm x 4.4 mm and 0.65 mm pitch package.

Figure 7-3 TSSOP20 package outline

Table 7-3 TSSOP20 package parameters

Symbol	Min (mm)	Typ (mm)	Max (mm)
A	-	-	1.20
A1	0.05	-	0.15
A2	0.80	-	1.05

Symbol	Min (mm)	Typ (mm)	Max (mm)
b	0.19	-	0.30
c	0.09	-	0.20
D	6.40	6.50	6.60
E	6.30	6.40	6.50

e	0.65 BSC		
L	0.45	0.60	0.75
L1	1.00 REF		
θ	0°	-	8°

7.4 QFN20

QFN20 provides two package outlines. One is a 3 mm x 3 mm and 0.4 mm pitch package (Figure 7-4), the other one is a 4 mm x 4 mm and 0.5 mm pitch package (Figure 7-5).

Figure 7-4 QFN20 package1 outline

Table 7-4 QFN20 package1 parameters

Symbol	Min (mm)	Typ (mm)	Max (mm)
A	0.70	0.75	0.80
A1	0.00	0.02	0.05
A3	0.20 REF

8 Ordering information

Table 8-1 HK32F030M ordering information

Package	HK32F030M series	Packaging	Comments
QFN20	HK32F030MF4U6	Tape and reel/Tray	Package outline: 3 mm x 3 mm, 0.4 mm
QFN20	HK32F030MF4N6	Tape and reel/Tray	Package outline: 4 mm x 4 mm, 0.5 mm
TSSOP20	HK32F030MF4P6	Tape and reel/Tube	-
TSSOP16	HK32F030MD4P6	Tape and reel/Tube	-
SOP8	HK32F030MJ4M6	Tape and reel/Tray	-

9 Glossary and Abbreviations

Name	Description
ADC	Analog-to-Digital Converter
AHB	Advanced High-Performance Bus
APB	Advanced Peripheral Bus
AWU	Auto-Wakeup
CRC	Cyclic Redundancy Check
CSS	Clock Security System
DMA	Direct Memory Access
EEPROM	Electrically Erasable Programmable Read Only Memory
EXTI	Extended Interrupts and Events Controller
GPIO	General Purpose Input Output
I2C	Inter-Integrated Circuit
I2S	Inter-IC Sound
IWDG	Independent Watchdog
LSI	Low-Speed Internal (Clock Signal)
MCU	Microcontroller Unit
MSPS	Million Samples Per Second
NVIC	Nested Vectored Interrupt Controller
PDR	Power-Down Reset
PLL	Phase Locked Loop
POR	Power-On Reset
PWM	Pulse Width Modulation
RCC	Reset and Clock Control
RISC	Reduced Instruction Set Computing
SPI	Serial Peripheral Interface
SRAM	Static Random Access Memory
SWD	Serial Wire Debug
USART	Universal Synchronous Asynchronous Receiver Transmitter
WWDG	Window Watchdog

10 Legal and Contact Information

航顺芯片 and other Hangshun trademarks are trademarks of Shenzhen Hangshun Chip Technology R&D Co., Ltd. All other trademarks or trade names mentioned in this document are the property of their respective holders.

Without the consent of Shenzhen Hangshun Chip Technology R&D Co., Ltd., any part and sub-part of the company's product specifications and datasheets must not be modified in any form or way. Shenzhen Hangshun Chip Technology R&D Co., Ltd. reserves the right to modify the data sheet and/or products, discontinue any product or terminate the service without notice. It is recommended that customers obtain the latest version of relevant information and verify before placing an order. Ensure the timelines and completeness of information. All products are sold in accordance with the terms of the sales contract provided at the time of order confirmation. The terms include the scope of warranty, intellectual property rights and the scope of responsibility.

Shenzhen Hangshun Chip Technology R&D Co., Ltd. guarantees that the performance of the product is guaranteed in accordance with the company's standard during the sales period. The company believes it is necessary to maintain this warranty and will use testing and other quality control techniques. Except for mandatory government regulations, there is no need for special tests for measuring by other instruments.

The customer acknowledges that the purpose of the design and production of the company's products does not involve life support or used in other dangerous activities or other systems or products in the environment. Malfunctioning products can cause personal injury or death, property or environmental damage (collectively referred to as high-risk activities). The company's products are artificially used in high-risk activities, and the company does not guarantee it and is not liable to customers or third parties.

Shenzhen Hangshun Chip Technology R&D Co., Ltd. will provide the same technical support, help, advice and information as it is now (including the design, development or debugging of the purchased circuit board or other applications). Hereby declare that for all technical support, marketability or for specific purpose, and if the circuit board and other applications can be operated or run under the correct technical support, the company will not make any guarantee for such support technology, and no legal responsibility for your use of this support service.
